Prof. Gabriele Steidl
Editor-in-Chief, SIAM Journal on Imaging Sciences
3600 Market Street, 6th Floor, Philadelphia, PA 19104, USA

Dear Prof. Steidl,

On behalf of my co-authors Can Evren Yarman and Ozan Öktem, I am pleased to submit our manuscript “Motion-Enabled Tomography via Gaussian Mixture Models” for consideration for publication in the SIAM Journal on Imaging Sciences (SIIMS).

Our work offers a novel parametric tomographic reconstruction method for objects undergoing unknown motion in arbitrary dimensions. We believe this manuscript is well-suited to SIIMS for its use of mathematics and machine learning to leverage an algorithm with direct applications to problems in tomography. Specifically, this addresses the SIIMS remit of developing ‘*new mathematical models and ideas for critical problems in the broad area of imaging sciences*’.

Based on the scope of this manuscript, we suggest Markus Haltmeier, Martin Uecker, or Andreas Hauptmann as potential handling editors, given their respective expertise in deep learning-based tomographic reconstruction, real-time imaging and dynamic inverse problems.

For disclosures and technical compliance with SIAM policy, we declare the following:

- **Prior publication** – This work has not been published or submitted to be published elsewhere.
- **Supplementary materials** – Video demonstration `temporal_gmm_comparison.avi`.
- **LaTeX formatting** – We confirm that the manuscript has been prepared using the standard SIAM LaTeX macros.

Thank you for the opportunity to have our work reviewed by the SIIMS editorial board. We look forward to hearing from you regarding the status of our submission.

Yours sincerely,

Dr. Daniel Burrows
